Rebecca Atuhaire

Founder, Agrisensor Technologies

Rabecca Atuhaire's enterprise Agrisensor Technologies is a platform that enables low-income earners to access agricultural commodities for sale on credit as well as access to ready markets to prevent post-harvest losses and promote financial security among women. The company also provides financial assistance to women in the Kalerwe market.

These women sell much-needed goods including tomatoes, onions, mangoes, pineapples and bananas. By providing them with weekly sums of money, Rabecca's enterprise improves the livelihoods of low-income women in her communities by enabling business sustainability, trade, affordable credit facilities and low-cost financial services.

Rabecca specialises in building resilience of ICT and agriculture to major hazards and has worked in both sectors for six years. She has an interest in technology, agriculture, public health and social care. By rethinking how knowledge is produced, challenging current economic models, and identifying overlooked social and political dynamics, her approach places notions of well-being, institutional change, citizenship, and social justice at the focal point of her research. She has six years working over Africa and is committed to involving grassroot communities in the production of food and women empowerment in agricultural business.
